Altius Proactiv+ HP provides all the benefits of Altius ProActiv+ with an integrated purple high pressure line to deliver contrast media, reducing the need for additional cannulations in critically ill patients.

Combining a non-thrombogenic (PEG) with PHMB (an antimicrobial), Altius ProActiv+ provides antimicrobial effectiveness to protect your patient for the duration of use.

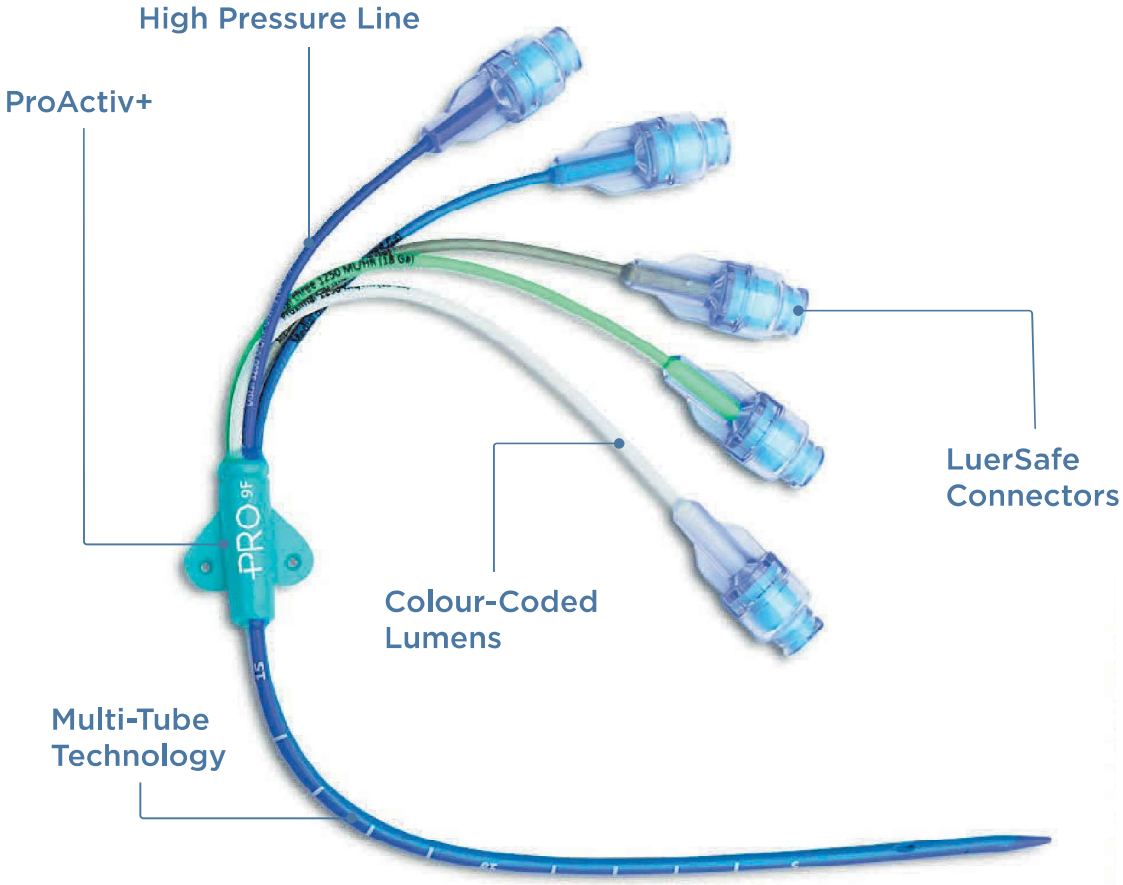

Altius ProActiv+ HP's dedicated high pressure line can deliver contrast media infusions up to 300psi with a flow rate of 10ml/sec and a viscosity rating of 11.8cP units at 37°C.

The Range

Adult sizes available in 1 to 5 lumen configurations.

Perfectly round lumens
in **every configuration**

Why choose Altius Pro HP?

Dedicated High Pressure Line

Dedicated line compatible up to 300psi and 10ml/sec.

ProActiv+

A chlorhexidine free, non-eluting, covalently bonded antimicrobial to protect your patient for duration of use.

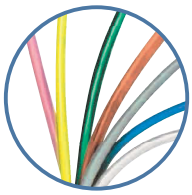

Integrated LuerSafe Connectors

LuerSafe needleless valves automatically maintain a closed system when not in use - eliminating the need to clamp or unclamp lines, reducing unintended air ingress.

Multi-Tube Technology

Perfectly round lumens to deliver higher flows.

Colour-Coded Lumens

For easy identification when determining which drug is infused through which lumen.

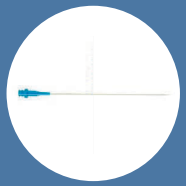

INSERTION KIT

The insertion kit has been designed to reduce risks during insertion.

Echogenic Needle: Easy visualisation under ultrasound to prevent posterior wall puncture.

Hydrophilic Dilator: For smooth dilation to prevent vessel trauma.

Altius Guidewire Dispenser: Ergonomic design to facilitate kink-resistant nitinol guidewire advancement, even with wet gloves.
